

ONE STOP SOLUTIONS IN HEATING EQUIPMENTS

BOILER
BURNERS
THERMIC FLUID
HOT WATER GENERATOR
BAG FILTER
ESP
WATER TANK
WATER SCRUBBER
CHIMNEY
RO/ SOFTNER PLANTS

BOILER

A boiler is a closed vessel in which water or other fluid is heated to generate steam or hot water. Boilers can be fueled by various sources, including natural gas, oil, coal, and biomass. Boilers play a critical role in many industries, from manufacturing to healthcare, and are essential for keeping buildings warm and providing hot water for daily use. This is what we offer you in Boiler, IBR Boiler Gas Fire, Oil Fire, Solid Fire making with Energy Process Equipment & Par Technoheat

THERMIC FLUID

Thermic fluid, also known as heat transfer fluid, is a type of fluid that is used for transferring heat from one point to another. It is a closed-loop system in which the fluid is heated in a heat source, and then the heated fluid is transported to a different location where the heat is transferred to another medium, such as air or water. This is what we offer you in Thermic Fluid, Heater Gas Fire, Oil Fire, Solid Fire with Energy Process Equipment & Par Technoheat

BAG FILTER

A BAG Filter is a type of air pollution control device that is used to remove particulate matter from industrial and commercial processes. It works by capturing solid or liquid particles from gas streams using a fabric bag made of woven or felted material. We Design & Manufacture BAG Filter inhouse with respect to GPCB norms.

WATER TANK

A Water Tank is a container designed to store water for various purposes, such as domestic, commercial, or industrial use. Water Tank is having features such as insulation, heating, or cooling systems depending on the intended use.

BURNERS

We supply Elco make imported Burners. ELCO is committed to develop innovative technological solutions allowing to optimise the running of the installations, to ease technicians work, and naturally to preserve the environment. We are authorized for Gujarat and Rajasthan

HOT WATER GENERATOR

it is a Device that heats water to a desired temperature using a heat source such as gas, oil, electricity, or biomass. The heated water is then stored in a tank or circulated through a closed loop system. This is what we offer you in Hot Water Generator, Gas Fire, Oil Fire, Solid Fire make with Energy Process Equipment and Par Technoheat

ESP

An electrostatic precipitator is a type of air pollution control device that removes particles from a gas stream using electrostatic forces. We Design ESP & site fabrication work at site with material & also without Materials.

WATER SCRUBBER

Water Scrubber is a type of air pollution control device that is used to remove gases or particulate matter from an industrial exhaust stream. We Design & Manufacture Water Scrubber inhouse with respect to GPCB norms. water scrubber system is important to ensure its effectiveness and compliance with environmental regulations.

CHIMNEY

The primary function of a Chimney is to provide a safe passage for hot gases and smoke to exit a building without causing damage to the building or creating health hazards. We Customize the Chimney as per the end to end customer's requirement, and also according to their design & what fabrication to be used. This is what we offer you in Chimney Monkey Leder, Lighting Errestor Platform, Earthing Strip Etc.

RO AND SOFTNER PLANTS

RO Plants use a semipermeable membrane to remove dissolved solids, minerals, and other impurities from water. Softener plants are used to remove hardness-causing minerals such as calcium and magnesium from water. We Customize the RO & Softener Design & Supply to the end customer as per their Requirements. we also providing sperate spare parts of RO & Softener plant like Multi valve, FRP Vassel, Memren & Chemical.
